Motorcity Systems

Release Notes

Release Date: 04/27/2021

Identity

- Added a switch for the Tenant to allow the storage of historical data of telematics events, such as the locations of power units and hours of service, or HOS, for drivers.
- Added the synchronization of users with Microsoft authentication.

Relay

- Added Hours of Service, or HOS, details and improved the layout of the Driver Card. See image, "Improved Driver Card."
- Added a hover card for Tasks displaying a summary and description of an individual task. See image, "Hover Card for Tasks."
- Improved the ability to mark messages as read or unread. See image, "Read and Unread Messages for Drivers."
- Improved the layout of the driver panel, including the driver's online or offline status and separating drivers with unread messages from those with read messages.
- When a driver is disabled, the driver and message status will be removed from the Driver Group.

Torque

- Added validation for driver logins with Eleos.
- When enabling the synchronization of heartbeats, HOS events, and device data, syncs start from the current date and time minus 15 minutes. When disabling the synchronization of heartbeats, HOS events, and device data, the user is notified of the consequences of turning off the synchronization.
