

Release Notes

Release Date: 3/19/2024

RELAY

- FEATURES
 - Added logic to ensure dispatchers do not see estimated clocks if HOS timers have not been received for the driver.
 - Added the option to notify drivers about a document's rejection in the document review process. See image, "Notify a Driver of a Rejected Document."

ROLLER

- FEATURES
 - Added conditions to signature fields.

ROLLER Desktop

- FEATURES
 - Added logic to prevent announcements from being created with expiration dates in the past.
- BUG FIXES
 - Resolved an issue with duplicate announcements being created when saved.

TORQUE

- FEATURES
 - Added a new provider, CoPilot.
 - Added information, such as hub miles, to the tractor profile in TMWSuite from Geotab telemetry data.
 - Added integration for form macros for the Platform Science integration.
 - Added logic to ensure that stops update in TMWSuite if not sent or skipped in ROLLER.
 - Added logic to set the status of the next dispatched load to "NEXT" for ROLLER.
 - Added logic to update workflow when a trip goes from planned to completed for TMWSuite integration.
 - Expanded the logic used when launching mobile ELD apps from within a workflow app.
 - Updated endpoints for the Omnicracs XRS integration.
- BUG FIXES
 - Resolved an issue comparing trailer numbers by making the fields case-insensitive.
 - Resolved an issue with moves that, when started as empty, did not appear correctly in ROLLER.
 - Resolved a truncation error with the geolocation description field in TMWSuite.
