

Release Notes

Release Date: 4/30/2024

RELAY

- BUG FIXES
 - Resolved an issue where drivers initially part of a group message still received the message after being removed from the list of recipients.
 - Resolved a server error that resulted from searching for a driver.

ROLLER

- FEATURES
 - Added text-to-speech to read messages, based on configuration, to the driver during navigation. See image, “Text-to-Speech Playback.”
 - General maintenance and performance improvements.

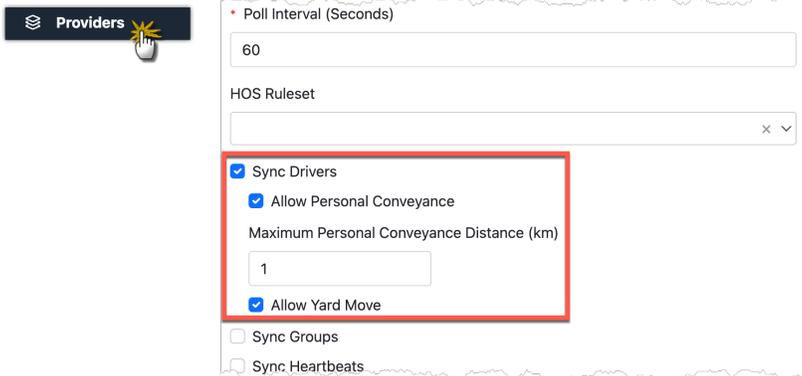

ROLLER Desktop

- FEATURES
 - Added a preventative measure to not allow a signature from being disabled if part of a document or form. See image, “Prevent Signatures in use from being Disabled.”
 - Added validation to filename patterns for signature fields.

TORQUE

- FEATURES
 - Added driver validation to loads before updating the carrier’s TMS.
 - Added fuel level and speed to the vehicle data check calls for the Samsara integration.
 - Added personal conveyance and yard move options to the Geotab configuration screen. See image, “Geotab Configuration.”
 - Added support for accepting and rejecting loads for the TMWSuite and Eleos integrations.
 - Added support for team drivers using TruckMate and ROLLER.
 - Added the ability for the BlackBerry Radar integration to send a BlackBerry Share link to a driver as a part of a workflow.
- BUG FIXES
 - Resolved an issue with webhook functions for the Eleos integration.
 - Resolved an issue with fields truncating and not updating properly in TMWSuite from ROLLER.
