

# Release Notes

Release Date: 11/26/2024

## RELAY

- FEATURES
  - Improved page styling for overall design consistency.
  - Replaced the Messages and Workflows toggles with a menu and added filtering options for forms and messages in the message thread. See image, “Filtering Forms and Messages.”
- BUG FIXES
  - Resolved an issue with the polygon tool removing drivers from the lassoed area when the lasso was moved.

## ROLLER

- FEATURES
  - Added support for showing messages with images sent from RELAY to ROLLER drivers.
  - Added the ability to authenticate and sign in with a Microsoft account.
- BUG FIXES
  - Resolved an issue where the Next button for a trip could be tapped multiple times resulting in multiple steps being completed in error.

## ROLLER Desktop

- FEATURES
  - Improved validation and saving behaviors on the settings pages. See image, “Improved Validation and Saving Behaviors.”

## TORQUE

- FEATURES
  - Added conditional update capabilities for generic workflow updates.
  - General maintenance and performance improvements.
  - Improved reporting on fuel and trip output using Geotab data.
  - Upgraded the Eleos provider to .NET 8.
- BUG FIXES
  - Resolved an issue with drivers not syncing due to an invalid classification record.

## Filtering Forms and Messages
