

Release Notes

Release Date: 4/15/2025

RELAY

- FEATURES
 - Implemented a feature to apply the same system validation to fields edited during document review as when drivers enter them in ROLLER.
- BUG FIXES
 - Resolved an issue where a user's initial search results in the dropdown menu did not match the full results view by prioritizing drivers and power units and sorting the remaining results by the most recent date.

ROLLER

- FEATURES
 - Added barcode and QR code scanning for populating text fields. See image, "Code Scanning for Text Fields."
 - Added the ability to preview uploaded documents prior to submission. See image, "Preview a Document."
- BUG FIXES
 - Resolved an issue where navigating between unread announcements did not mark them as read.
 - Resolved an issue where rotating the device while on the Home screen temporarily opened the company details.

ROLLER Desktop

- FEATURES
 - Added logic to allow rule conditions to be based on the presence, in addition to the value, of a source field. See image, "Source Field Only Condition."
 - Added logic to prevent rules from being disabled if they are part of a workflow.
 - Added logic to prevent source fields for comparisons and conditions from being deleted.
 - Added settings to configure barcode and QR code scanning for text fields.
- BUG FIXES
 - Resolved an issue where canceling an action removed the "Show action if stop ordered" condition setting.

TORQUE

- FEATURES
 - Added batch API support for trip sync between ROLLER and the customer's TMS.
 - Added logic to not change the event type for trips starting with billable empty stop types in TMWSuite.
- BUG FIXES
 - Resolved some threading issues in the TORQUE Client.
 - Upgraded the TORQUE Client monitor to .NET 8.
