# Release Notes

Release Date: 4/29/2025

## RELAY

- BUG FIXES
  - Resolved an issue where users occasionally could not update the document type during the document review process.

## RELAY Mobile

- FEATURES
  - Added a common location description to the driver's location details for customers integrating with Motive, Platform Science, and Samsara. See image, "Driver's Common Location."
  - Added form details to workflow messages. See image, "Workflow Message Details."

## ROLLER Desktop

- FEATURES
  - Added options to control a workflow's visibility when applied to a trip, either by setting it as the default or allowing users to define its visibility based on business units or specific conditions. See image, "Visibility Conditions on a Workflow."
  - Added settings to restrict driver usage of the Find a Trailer tool to trailers within a specified radius. See image, "Configure Location Validation for the Find a Trailer Tool."

## TORQUE

- FEATURES
  - Added a setting to toggle the creation of deadhead stops when starting a trip for the TMWSuite integration.
  - Added a setting to toggle the update of driver and tractor pairing in TMWSuite when a driver signs in or out or updates duty status.
  - Added new data elements for driver and load assignments to the integration with Optimal Dynamics to enhance configurability.
  - Updated the integration with the Samsara provider to a utilize new webhook events that provide more details with geofence entries and exits.

## WIRE

- FEATURES
  - Added visual indication of failed transactions.
