Release Notes

Release Date: 7/22/2025

ADMIN

- FEATURES
    - Added classifications and SMS authorization status to the driver export.
    - Improved page styling for overall design consistency.

RELAY

- BUG FIXES
    - Made improvements in handling long text entries in the details of a trip.

ROLLER

- FEATURES
    - Improved the form submission process by not requiring the forms to be opened if they only contain hidden fields.

ROLLER Desktop

- FEATURES
    - Added settings to specify the sorting of active and completed trips, based on either the trip start date or a custom sequence number, along with the order of sorting. See image, "ROLLER Trip Settings."
    - Added settings to specify which stop date should be used as the primary reference for displaying active and completed trips: either the stop's actual arrival or departure date, or the stop appointment date. See image, "ROLLER Trip Settings."
    - Improved page styling for overall design consistency.
- BUG FIXES
    - Improved saving new or existing fields on documents and forms by keeping all unsaved field-level changes on form save.
    - Improved scrolling documents for drivers and groups.

TORQUE

- FEATURES
    - Added a setting and functionality to import geofence data from the Samsara provider to locations in ADMIN.
    - Added a value to the provider runtime log that indicates when data has been exported out of TORQUE for the Optimal Dynamics integration.
    - General maintenance and performance improvements.

We value your feedback! If you have a question about a product or feature, or have something to share with the team, please contact your Motorcity Systems representative or send an email to support@motorcity.systems.

- Improved the configurability of both inbound and outbound calls between the Qued and TruckMate providers.
- BUG FIXES
    - Resolved an issue creating check calls due to the length of the city name exceeding 30 characters when integrating with TMWSuite.
    - Resolved an issue that prevented new drivers from being created when synced.
    - Resolved an issue with the Qued integration that required an implementer to open the Handlebars mapping tool in order for the export to work.
    - Resolved an issue with handlebar mapping so that the parameter was correct for Qued.
