

# Release Notes

Release Date: 8/5/2025

## ADMIN

- FEATURES
  - Improved page styling for overall design consistency.

## ROLLER Desktop

- FEATURES
  - Added settings to rules to automatically advance a driver to the next step if all actions on the current step have been completed. See image, “Auto-Advance a Step for a Driver.”
  - Added the ability to configure driver form delivery based on submitted field values. See image, “Conditional Settings for Delivery Methods.”
  - Added validation to source field values based on the field rules when configuring conditions on forms, document types, or delivery methods.
- BUG FIXES
  - Resolved an issue where the informational popover on an inactive delete button remained visible after mousing off of the icon.

## TORQUE

- FEATURES
  - Added a setting to control whether or not a load auto-completes when the driver arrives at the final billable stop.
  - Added functionality to update stop auto-arrival and departure fields in TMWSuite for customers using geofences with auto-arrivals and departures.
  - Added logic to not send completed loads that have been reopened back to the driver if they are more than 30 days old.
  - Added logic to update the mobile communications status of the stop and the leg in TMWSuite when a driver departs.
- BUG FIXES
  - Resolved an issue where a driver certifying logs could affect the TMWSuite shift logic by optionally limiting updates to those ELD events with a power unit attached.
