

Release Notes

Release Date: 9/16/2025

RELAY

- FEATURES
 - Improved page styling for overall design consistency.
- BUG FIXES
 - Resolved an issue where users without access to documents or messages did not have a landing page.
 - Resolved an issue where users without access to messages received new message notifications.
 - Resolved an issue with group messages where the driver details dialog box did not show drivers that were found in the system.
 - Set a limit on group messages to 1000 drivers at a time.

ROLLER Desktop

- FEATURES
 - Added column filtering for Document Types and Forms grids. See image, “Column Filters.”
 - Added functionality to copy an existing form to create a new one. See image, “Copy a Form.”
 - Improved page styling for overall design consistency.
- BUG FIXES
 - Resolved an issue where incorrect fields appeared when editing ELD forms with multiple form setups for shipment assignment integration.

TORQUE

- FEATURES
 - Added a new setting to automatically arrive or depart and complete the trip for specified event types for the TMWSuite integration.
 - Added functionality to automatically attach shipment and trailer information to driver logs based on the form set up in ROLLER Desktop and when the trip is completed, detach the shipment information from the log.
 - Added functionality to treat DLD events as LLD events for the TMWSuite integration.
 - Added functionality to truncate the values in city, state, and zip code fields before inserting the data into check calls for the TMWSuite integration.
