

# Release Notes

Release Date: 9/30/2025

## GAUGE

- FEATURES
  - Added a column for noting the operating system version to the ROLLER device usage report.

## RELAY

- FEATURES
  - Added a geofence label to a form's details after a device breaks an arrival or departure geofence automatically completing the form. See image, "Form Submitted by a Geofence Break."

## RELAY Mobile

- FEATURES
  - Improved page styling for overall design consistency.

## ROLLER

- BUG FIXES
  - General maintenance and performance improvements.

## TORQUE

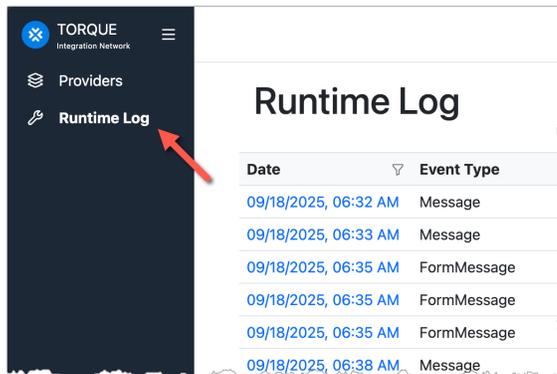

- FEATURES
  - Added a setting to auto-arrive and depart the last stop when arriving at the last stop on a trip.
  - Added data processing and trailer handling logic from departure forms to the TMWSuite integration.
  - Removed the individual runtime logs from the providers and added a link in the sidebar, "Runtime Log," where a user may select a runtime log to view based on their access. See image, "Runtime Log."
  - Updated the mapped data from Samsara events to standard field types.
- BUG FIXES
  - Resolved an issue where a workflow value would cause the system to ignore stop-specific settings for the TMWSuite integration.
